Bourque Data Systems Certifies IONX's Edge™ Asset Monitoring Systems

Rail shippers can now access IONX asset monitoring data within BDS's RAILTRAC® system.

The Woodlands, TX and West Chester, PA - September 1, 2009 - Today Bourque Data Systems (BDS), a leader in rail logistics software, certified for use with the its RAILTRAC® system, IONX LLC asset monitoring systems for railcars and locomotives. With this integration, shippers can now enhance decision-making, asset management and regulatory compliance through regular data feeds and alerts on the location and status of railcars.

IONX, a business unit of Amsted Rail, offers the Edge™ asset monitoring system for railcars – a technically advanced, robust fleet tracking and monitoring product. The system delivers location and condition status reports through either satellite or cellular connections to help shippers, offerors and others improve shipment safety, security, turn cycles and fleet utilization.

"We are very pleased to have completed this important integration between IONX devices and our RAILTRAC® software. IONX and Amsted Rail bring a previously missing, but critical, component to the remote sensing arena - this is railcar installation and field support required for rail remote sensing devices. Our customers will benefit," said Steve Bourque, President, Bourque Data Systems.

"We are pleased to be able to provide our customers with the ability to seamlessly integrate IONX asset monitoring data into the RAILTRAC® system, providing them with another tool that can help them achieve their business objectives," commented William D. LeFebvre, chief technology officer, IONX.

About Bourque Data Systems Inc.

Headquartered in The Woodlands, Texas, Bourque Data Systems (BDS) has been automating rail shipment processes for shippers since 1989 with the RAILTRAC®, the leading rail fleet and shipment management software for rail shippers. BDS now provides a full suite of modules to address multi-mode shipment operations, loading and inspection, fleet accounting, freight payment, supply chain, and VMI programs. Their EDI data services connect suppliers, customers, carriers and vendors. The BDS Logistics group provides professional transportation management support and railcar maintenance management.
