### **Bourque Logistics introduces RAILPort™ Report Writer**

*Rail shippers can now build custom reports within BL's RAILPort Report Writer.*

**The Woodlands, TX - April 26, 2011** - Bourque Logistics (BL), a leader in rail logistics software, introduces RAILPort,™ a new web-based report writing tool that allows customers to create their own custom reports. The RAILPort™ tool reports live data pulled from the Bourque Logistics software modules, which has proven to be a valuable, time-saving asset to Bourque customers.

RAILPort™ is extremely user-friendly, allowing Bourque customers to build custom reports from pre-written report templates and also provides the ability to build reports across multiple licensee applications.

Using RAILPort™, you can add/delete data fields, re-size columns, sort column order, and group/filter data. Our customers can even distribute reports via email as a PDF or Excel file, as a live link, timed schedule, or internally as a shared report. RAILPort™ users can also take advantage of video training for all Bourque Logistics software modules. A direct link to our training site, RAILChannel®, is imbedded in the RAILPort™ application.

This convenient application also provides users with the ease of creating reports that will allow a non-transportation user to enter search criteria such as origin, destination, commodity, car number and train ID to display all pertinent rates, car trace or unit train information in a user friendly format.

The RAILPort™ Report Writer application also enables the user to create reports that show the accessorial charges that have been paid by facility, by commodity or for a designated time period. Reports can also be created to allow a non-transportation user to search for empty cars enroute to a specific location – including car number, car size – for any given point in time.

“This newest addition to our software suite provides our clients versatile and robust report writing capabilities with the added benefit of automatic distribution to those who require up-to-date reports. In particular, RAILPort’s Live-Link function provides the most recent data that “canned” reports do not,” commented Steve Bourque, president, Bourque Logistics.

#### **About Bourque Logistics**

Headquartered in The Woodlands, Texas, Bourque Logistics has automated rail shipment processes for shippers since 1989 with RAILTRAC®, the leading rail fleet and shipment management software for rail shippers. BL now provides a full suite of modules to address multi-mode shipment operations, loading and inspection, fleet accounting, freight payment, supply chain, and VMI programs. Their EDI data services connect suppliers, customers, carriers and vendors. BL also provides professional transportation management support and railcar maintenance management.
