

THE BENEFITS

Yardmaster® provides:

- Maintains locations of rail equipment within the plant facility as well as surrounding rail yards to the track and sequence level.
- Creates switch lists such as railroad call-in, internal, rack, and railroad pull. These lists can be printed, faxed or e-mailed.
- Improves loading options by railcar selection based product compatibility and customer requirements.
- YardMaster® easily interfaces with order systems handling last minute adds, cancels, and revisions.
- Processing of railcars and trucks is by drag and drop functionality to avoid entry of the equipment IDs, thus reducing transposition of equipment IDs.
- Hoisting feature allows flagging railcars in need of service to prevent order assignment, load, or shipment until equipment is removed from hoist.
- Loading rack schedules for current and future days can be created with multiple per day switches. A one-screen function is easy to use and provides a rock-centric method of order and equipment assignment to racks.
- Custom inspection checklists can be created and used to record inbound and outbound inspections.
- YardMaster® provides easy interface with Wavenet™ portable and fixed AEI readers allowing car inventory and status to be collected and updated immediately from the field.

- Provides volume correction and outage calculations. Stores outage/image tables.

eBILL™ provides:

- An electronic bill of lading feed to the railroads and acknowledgement.
- Stores bill of lading historical information for later audits or analysis.
- Facilitates unit train billing generation.
- Provides volume correction and outage calculations. Stores outage/image tables.
- Stores and manages distribution of HAZMAT information and complies with Canadian HAZMAT requirements.
- Provides patterns for repeat moves to reduce data entry.
- Integrates with RatesServer® to calculate the freight cost of the shipment.
- Internet hosting option makes it available to large numbers of remote billing locations.

YardMaster® is a versatile software used to expedite the handling of railcars and trucks at plant, terminal, and storage facilities. Coupled with Wavenet™ AEI scanner technology, YardMaster provides a powerful yard management solution that boosts efficiency and accuracy.
